

Contents

Preface

Chapter 1	Introductory Models	1
	<i>Section 1.1</i> Mathematical Models	1
	<i>Section 1.2</i> Systems of Linear Equations	11
	<i>Section 1.3</i> Markov Chains and Dynamic Models	21
	<i>Section 1.4</i> Linear Programming and Models Without Exact Solutions	37
	<i>Section 1.5</i> Arrays of Data and Linear Filtering	48
Chapter 2	Matrices	61
	<i>Section 2.1</i> Examples of Matrices	61
	<i>Section 2.2</i> Matrix Multiplication	71
	<i>Section 2.3</i> 0–1 Matrices	98
	<i>Section 2.4</i> Matrix Algebra	112
	<i>Section 2.5</i> Scalar Measures of a Matrix: Norms and Eigenvalues	127
	<i>Section 2.6</i> Efficient Matrix Computation	141

Chapter 3**Solving Systems of Linear Equations****157**

<i>Section 3.1</i> Solving Systems of Equations with Determinants	157
<i>Section 3.2</i> Solving Systems of Equations by Elimination	175
<i>Section 3.3</i> The Inverse of a Matrix	193
<i>Section 3.4</i> Solving Matrix Problems by Iteration	215
<i>Section 3.5</i> Numerical Analysis of Systems of Equations	236

Chapter 4**A Sampling of Linear Models****255**

<i>Section 4.1</i> Linear Transformations in Computer Graphics	255
<i>Section 4.2</i> Linear Regression	272
<i>Section 4.3</i> Linear Models in the Physical Sciences and Differential Equations	287
<i>Section 4.4</i> Markov Chains	303
<i>Section 4.5</i> Growth Models	321
<i>Section 4.6</i> Linear Programming	Omitted
<i>Appendix to Section 4.6:</i> Linear Programming Details	
<i>Section 4.7</i> Linear Models for Differentiation and Integration	Omitted
<i>Appendix to Section 4.7:</i> Computing Cubic Spline Approximations	Omitted

Interlude:**Abstract Linear Transformations and Vector Spaces**

Omitted

Chapter 5**Theory of Systems of Linear Equations and Eigenvalue/Eigenvector Problems**

Omitted

<i>Section 5.1</i> Null Space and Range of a Matrix	Omitted
<i>Section 5.2</i> Theory of Vector Spaces Associated with Systems of Equations	Omitted
<i>Section 5.3</i> Approximate Solutions and Pseudoinverses	433
<i>Section 5.4</i> Orthogonal Systems	Omitted
<i>Section 5.5</i> Eigenvector Bases and the Eigenvalue Decomposition	478
<i>Appendix to Section 5.5:</i> Finding Eigenvalues and Eigenvectors	499

A Brief History of Matrices and Linear Algebra	507
Text and Software References	511
Solutions to Odd-Numbered Exercises	515
Index	535

A Unified Introduction to Linear Algebra:

*Models, Methods,
and Theory*
